

ENVIRONMENTAL POLICY

We as SÖNMEZ A.S.F; In order to ensure the continuity of human life, we believe that all of our production activities

should be adopted in the steps of the principle of Sustainability.

For this reason, we comply with local and national legislations and also take into account all international environmental regulations in line with the demands of our customers.

At all stages of our production process; To ensure the continuity of continuous improvement and development, Social development along with economic growth and environmental protection are our main goals.

We will ensure the continuity of training activities for all our employees, subcontractors and suppliers in order to develop environmental protection awareness and consciousness.

We will adopt a preventive approach in order to prevent the pollution that we cause in line with the environmental aspects of our organization.

We will share our environmental performance with all our stakeholders.

We will monitor our use of natural resources such as water, electricity and natural gas according to 2019 data.

We will reduce above by 15% within 3 years, and we will make all the chemicals used in our facility that comply with ZDHC RSL standards by the end of 2021.

From a life cycle perspective, starting from our use of raw materials we undertake and confirm that we aim to bring the waste we create into the circular economy.
